PRESS-RELEASE

Meppen, 31th Juli 2013

„Nothing can outmatch piston capacity...“

Is there some truth in the old wise saying among motor designers and tuners? Not at all. The Meppen-based unoTech channel bale press manufacturer disproves the „working volume theory“.

Berlin. With their acquisition of the new **UPAMAT 120 V4/H3** type press the Berlin-based Bartscherer GmbH & Co. KG again decided on a **unoTech GmbH** product. The motorization of the 2 x 90 kW channel bale press, the cross-over wiring, which can be activated or deactivated, as well as the 750 x 1100 cm bale format ensure that the company can use all fractions of the range of types to be pressed. In addition to lower production costs, a significant reduction in storage and loading costs is the result. The use of advanced valve, pump and sensor technology ensures an optimum adaptation of the treatment parameters and a continuous working cycle. Even in the area of cutting angle geometry and safety equipment the unoTech GmbH with the UPAMAT 120 V4/H3 optimizes their own recipes of success.
