**IT'S A  
MATCH!**

UPANEXT<sup>®</sup> + UWUK<sup>®</sup>

**TWO UNITS, ONE PERFECT MATCH!**

# TWO UNITS, ONE PERFECT MATCH!

**UPANEXT® + UWUK®.** The UPANEXT baling press and UWUK measuring system now communicate with each other as a complete system in a closed control loop. unoTech is thus opening a new chapter towards highly efficient, fully automatic, fully integrated press operation, which gives plant operators the certainty that they are economically well equipped for the future.

## BALE QUALITY IN REAL TIME

- + Bale labeling at the exit of the baler or at a separate weighing station is a thing of the past with UWUK
- + Expert knowledge is no longer required to parameterise a baler working in a network
- + In conjunction with a sorting system, process programmes for controlling the bunker systems, for example, can be managed much more efficiently
- + Bale stocks of different compositions can be managed more efficiently thanks to the clear determination of weight and bale volume with regard to all further planning of transport capacities or general criteria

### UPANEXT

THE NEXT GENERATION

### UWUK

WEIGHING AND LABELING UNIT

**UPANEXT® TSC/ACT + UWUK® =** Fully integrated system for highly efficient press operation with optimised product and target size management. Fully integrated into an entity database model as a key technology for modern recycling operations.
